1. Do you go to the dentist often?

- Dentistry in General

Are your teeth alright? Do you have discomfort, such as improperly fitted dental implants, loose dentures, stinging or throbbing toothaches? We provide full mouth treatment with your consultation at our clinic. Full mouth treatment is a treatment which detects diseases you have been unaware of and stop them with early procedure in addition to the treatment of the teeth you want to be treated. If treatment is given while symptoms are mild, it will only take a short time with low cost and simple procedures. We also provide a painless treatment with the latest laser technology, In addition, we put emphasis on daily brushing of teeth, and earnestly instruct you on tooth brushing. It is good for you to have a dentist with whom you can consult about anything anytime.

We hope you visit our clinic.

2. Can you smile in public without worrying about your teeth?

- Orthodontic dentistry (pediatric/adult orthodontic treatments)

Are you troubled with double teeth, protruding teeth, projecting lower jaw, gaped teeth, rough teeth, etc.? Do your children suck on their thumbs or have unusual tongue habits? Unusual habits of infants may greatly affect the growth of the face. Teeth straightening not only makes a beautiful smiling face, but also leads to a neat mouth with better occlusion and provides distinct pronunciation. In this age of globalization, “a beautiful smile”, which gives a good impression to others, is the basis of modern manners. There is no age limit on orthodontic treatment. Even if you couldn't get orthodontic treatment in your childhood, you can get adult orthodontic treatment. By getting partial orthodontic treatment, orthodontic treatment for periodontal disease and orthodontic treatment with implants, it is possible to avoid teeth loss and dentures. Please consult with us with any questions.

3. Do you know about cosmetic dentistry?

- Cosmetic dentistry

Are you giving a bad impression to others with nicotine, dental calculi, yellow teeth or blackened gums in addition to cavities? We clean and bleach your teeth by introducing the latest instruments. Do you have old silver teeth in your mouth? We can replace silver teeth with ceramic ones. We can also replace discolored teeth or dental implants with completely mismatching colors. Do you

know about teeth bleaching? If you have generally yellow teeth, the yellowing cannot be removed only by cleaning. The teeth may become more yellowish with age. We recommend this treatment to those who suffer from teeth discoloration, including those with naturally yellow teeth. This is the method of whitening teeth without scaling them. It makes a difference with just one try.

It is a new dental practice which will show significant results. You will be pleased that you visited our clinic.

4. The latest painless treatment: Is it true that it is painless?

- Laser treatment

Yes, this is a painless treatment. Small cavities can be scaled with this treatment. Anesthesia and surgical knives are not necessary. Laser treatment is highly effective when treating periodontal diseases, removing darkened gingivae, preventing cavities and straightening the teeth structure by impregnation with fluoride. It is a treatment that even expecting mothers and those with pacemakers can go through without anxiety.

5. Children's teeth: We will help you protect your child's teeth!

- Pediatric dentistry

Children are not miniature adults.

You may not believe it, your children's eating habits during their infancy determines the condition of their teeth and jaws in their adulthood. We also provide a substantial preventive treatment (sealant, fluoride). We hope your children love to visit the dentist from their earliest childhood. Our kind staffs are also waiting for them.

In addition, we recommend expecting mothers to visit our clinic for a checkup in order to prevent mother-to-child infection. Please get dental care before you become a mother.

6. Do you have trouble with your dentures?

- Denture treatment

Do your dentures fit you? Are they too heavy? Aren't the metal fittings too conspicuous?

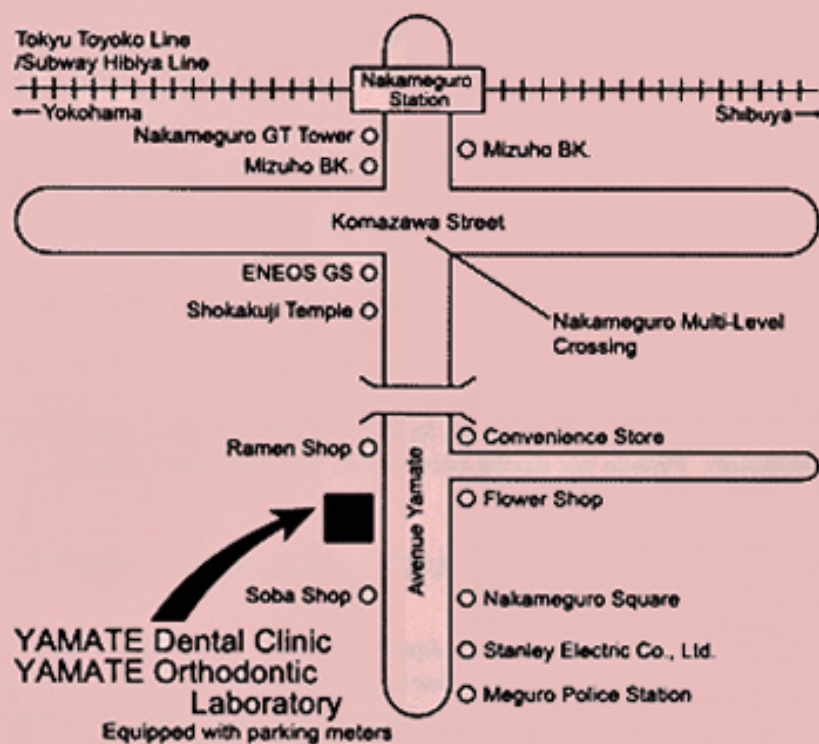

Just as your figure changes, the gums below dentures do too. Accordingly, it may sometimes be necessary to replace your dentures with new ones that better fit the present condition of your mouth. We recommend titanium dentures that

are the lightest and best for taste, and also dentures made with nylon material without metal fittings in case you don't want them to be too visible. We decide which dentures to use after a consultation, based on your design models and samples.

7. Can you get back your lost teeth?

- Implant (artificial dental root) treatment

This is a technology to bring back your lost teeth with artificial teeth. You don't have to wear dentures because artificial teeth can be implanted in the bones. In addition, there will be no longer be any pressure on the teeth caused by dental bridges. When you lose your teeth the bones become thinner. Accordingly, surplus muscles will be left around the mouth, which may form wrinkles. That is to say, you may look older. However, if implants are inserted, the shapes of the bones are maintained (just like when you had teeth) and so are the shapes around the mouth. New implants are developed every year with the best materials and into the best sizes. We hope you consult with us before you decide to wear dentures, thinking that there is no alternative.
